

Hand Safety

Protecting your hands can be a full time job. Your hands are involved in almost every single task they perform, from moving materials & working with equipment. **Use your knowledge** of PPE and equipment safety to help them keep their hands safe.

Personal Protective Equipment

- Leather Gloves for rough product handling
- Electrical Gloves for all electrical work
- Chemical Gloves – for acids, corrosives, etc.
- Medical Gloves – for first aid
- Cut Resistant Gloves – for sharp tools, knives
- Thermal Gloves – for hot and cold handling

Work Area Safety Check

- Ensure machine guards are in place
- Guard areas that have pinch or shear points
- Place protection on all sharp edges

Pre-Use Safety Check

- Use the proper glove for the task
- Never wear rings & bracelets while working
- Don't wear gloves if they can be caught in machinery
- Check gloves for wear and damage

Operational Safety

- Never place hands in machinery
- LOTO before adjusting equipment
- Know the hazards of chemicals
- Wash hands after using chemicals
- Store gloves properly to prevent damage

For more information please refer to GIS Personal Protective Equipment Policy

Please note changes to Chevron's PPE Policy below, effective immediately.

OE Element: 3 Safe Operations – **Personal Protective Equipment**

- With the goal of reducing hand injuries and incidents, gloves are now required in any area where minimum PPE is required. Gloves may however be removed for tasks requiring greater dexterity. In such cases, any hazards associated with the removal of gloves must be identified and mitigated in the Job Safety Analysis (JSA).
