Alert #: SA 13-25

Date: 04/17/2025

Report Near Misses – Prevent Future Incidents!

A near miss is a warning — a potential accident that didn't happen this time. Reporting near misses helps us identify hazards and take action before someone gets hurt.

Why It Matters:

Unreported near misses today can become serious incidents tomorrow.

Reporting helps improve safety systems and prevent recurrence.

Every report contributes to a safer workplace for everyone.

What To Do:

If you see a near miss, report it immediately using **LLCF-01 First Report of Incident**, found in the Safety Portal on the GISY website.

Be clear, detailed, and timely — even small incidents matter.

Safety starts with awareness. Prevention starts with reporting. Let's stay ahead of the hazards!

See something? Say something.

Proper use of the GIS LIFE Processes helps to create a Fail-Safe Work Environment.
