Alert #: SA 27-24

Date: Sept 19, 2024

SWA When using Jack Stands

A GIS crew was lowering a pipe spool piece onto a set of pipe jacks and noticed that one of the jacks were unstable prior to landing the load. The crew stopped the job before completely landing the load and had it lifted back up in order to remove the faulty pipe jack and replaced it with a new pipe jack. The crew discussed the situation and documented the Stop Work and completed the observation

Employees are reminded to conduct pre-use safety inspections of all tools and materials before use, and to have the Safe-to-Start conversation before beginning work.

***Report all incidents immediately to the Hotline
